Documentation to for PL Proposal

I. Introduction

Describe the proposed PL.

Inspiration for your PL

II. Syntactic Elements of language

1. Character Set –

explicitly enumerate the set of input symbols that you will be using in your PL.

Ex. ALPHA = {CAP, SM, DIGITS, SYMBOLS }

CAP = {A,B,C,D,…., Z}

SM = {a,b,c,d,…,z}

2. Identifiers = rules on naming your identifier

E.x. identifiers must start with a letter followed by…..

Regular Expression

0+1* =0, 1,11,1111,11111

With machine

3. Operation Symbols = with machine

a. Arithmetic operations

b. Boolean operations

b.1. Relational ex. <,>,==

b.2 Logical ex. Not, and, or

4. Keywords and Reserved Words

Explicitly state your set of keywords and set of reserved words (data types)

- with machine

5. **Noise words** – words that are in the reserved words that does not affect the execution of the

go to (go 45, go to 45)

- with machine

6. **Comments** - rules/ choice for your comment statement

- with machine

7. **Blanks (spaces)** – describe how blanks and spaces will be treated in your PL

8. **Delimiters and brackets** – what are the delimiters or brackets that you will be using in your PL and state its functions.

- with machine

9. **Free-and-fixed-field formats** – state if the proposed PL is in free field or fixed-field format

10**. Expression** – rules of evaluating expressions

a. Mathematical/Arithmetic expressions

b. Boolean expression (relational and logical)

- describe the hierarchy of evaluation your expressions

- ******

11. **Statements**

Give example of your statement for the ff:

a. Declaration statement (optional)

b. Input/Output Statements

c. Assignment Statement (expressions)

A= b

A = B+3

A= (b+3)*g/24

d. Conditional Statement (nested)

Ex. If

If else

If else if else

e. Iterative Statements (1 statement , nested)

Ex. For, for…..for…{for}
